

# YOUR DIGITAL HEALTH SOLUTION

At eQHealth Solutions, we are committed to ehealth and ehealth solutions.

Our goal is to help medical professionals take advantage of the rapidly evolving world of health information technology.

## Customized to your practice.

We recognize that not all practices or physicians have the same need, and that you need a solution that works for you today *and* tomorrow. We also understand that adding technology to your practice can be a daunting proposition.

The team at eQHealth Solutions makes the process easy and hassle-free by providing you with:

- A cost-free consultation to determine your specific needs.
- An in-depth assessment of your practice and your current office technology.
- Assistance with selecting the right electronic health record.
- Guidance with navigating the many federal requirements and federal funding opportunities.

## OUR eHEALTH SERVICES

### Education

Our consultant team provides you with the regular updates that will get you up to speed on the latest regarding ehealth. This includes:

- The benefits of going digital with an electronic health record (EHR)
- How to access federal funding incentives
- Interoperability with your existing IT system
- The reality of adopting technology and adapting your staff
- Exchanging health information with other providers and meeting federal requirements for use and reporting

### Adoption and Implementation

We can give your staff a complete assessment of your practice, your needs and your readiness to go digital. This is a comprehensive, on-site practice assessment and workflow analysis that easily guides you through each successive phase of EHR adoption. We will design an individualized plan for you to make the process as smooth as possible, resulting in successful adoption of an EHR.

### Practice and Workflow Redesign

Having served as EHR consultants for the Centers for Medicare & Medicaid Services in Louisiana, our staff understands the difficulties physicians and their staffs face when established workflow patterns are altered. Before an EHR is selected, we help minimize disruptions related to patient check-in, walk-in appointments, patient visits, filling prescriptions and handling documentation. We work with all of your appropriate staff to ensure a smooth transition to using your EHR.

### EHR Implementation

Our technology team will assist with defining the implementation project plan and the team members. We help you with assigning roles and responsibilities for all staff members involved in the process. We also develop a pre-implementation checklist and process for the handling existing data, as well as redesign the practice workflow and processes to incorporate into your EHR.

Call **225-926-6353** today to schedule a **FREE** consultation.

## Vendor Selection

With more than 100 years of combined experience, and with in-depth knowledge on almost all EHR systems, our team can be your project advisor and help you make the right purchase decision. We have developed a Systems Selection Tool that provides a side-by-side comparison of the features of different products. We will also assist in developing a final list of vendors for an on-site product demonstration. Ultimately, you get a non-biased expert to assist in the evaluation of products from different vendors based on your unique needs.

## Group Purchasing Assistance

Because we are already helping more than a thousand physicians who are adopting an electronic health record, we can assist in arranging group purchases and group discounts when you are ready to buy your EHR.

## Grants and Loans

Through our membership in the Healthcare Information and Management Systems Society (HIMSS) and other professional organizations, our consultants have the most up-to-date knowledge about grants and loan opportunities that are available.

## Implementation Assistance and Oversight

Once you have selected the EHR that is right for your practice and the product is installed and ready to go,

our consultants will work with your staff and the EHR vendor to ensure a trouble-free implementation. Our goal is to provide “change management assistance” that helps eliminate the misunderstandings that can occur between your staff and the vendor.

## Functional Interoperability and Health Information Exchange

We make sure the EHR vendor you choose is certified and their product is capable of meeting the requirements of information exchange and interoperability required by most private insurers and soon by the federal government.

## Privacy and Security

As a partner with CMS, we have extensive understanding and experience with protecting digital data. We bring this same level of commitment to you – maintaining security and protecting the confidentiality of patient medical information and client data – as you enter the digital age of health information.

## Achieving Meaningful Use

To qualify for federal funding incentives and avoid penalties, the government is setting strict requirements for EHR use. Our consultants have the knowledge and the experience to help your staff use your EHR effectively and meet these requirements.

## We're up to date, so you're up to date.

As a member of the Healthcare Information and Management Systems Society (HIMSS), eQHealth Solutions is committed to providing our clients with the most up-to-date information about health care public policy and industry practices. We subscribe to HIMSS' educational, professional development and advocacy initiatives that promote better quality patient care.

## Call 225-926-6353 for a FREE consultation.

At eQHealth Solutions, we put our IQs to work to implement effective and cost-efficient digital solutions for physicians and other health care providers. To find out how we can do this for you, contact us today at 225-926-6353.
